

## PowerBoss Scrubber Parts

The first carpet sweeper was created in Iowa, USA by Daniel Hess. It was created during the 1860's and from that time scrubbers and different floor cleaning machinery have really changed ever since then. His model had a rotating brush together with an elaborate system of bellows situated on top to produce suction. We are fortunate nowadays that scrubber machines and vacuum cleaners require a lot less effort to function and are electrically driven.

### The 4 Main Types of Floor Scrubber

Presently, there are four main kinds of floor scrubbing machines existing on the market. Each one of them has their very own special features that make them ideal for other market sectors and work environments. Some models are battery operated, a few are compact and could be simply packed away and kept, several models are a ride-on kind. The typical model is where the operator walks behind the equipment and guides it all-around the section that needs scrubbing. There are even floor scrubbing machines proficient at cleaning big areas all on their own because they have a computer or artificial mind. These automatic models can be programmed to work without a worker.

#### 1. Fold-away Floor Scrubbers

Fold-away floor scrubbers are ideal in small businesses where space is restricted. Vacuums and floor cleaning equipment need to be packed away efficiently in storage areas and small cupboards. This is when the folding machine style comes in useful. With this particular kind of floor scrubber, the main arm that is used so as to maneuver the machinery could be folded in several areas, making the equipment compact whenever it is not being utilized.

#### 2. Mains & Battery Operated

Although Mains operated floor scrubbers are the most popular, the battery operated version is perfect for environments where the existing power sockets are some distance away from the floor that requires scrubbing and extended utility leads are not an option. The battery operated model is perfect for small areas like washrooms with hard to reach parts which would be awkward to clean with a trailing power lead. The battery can be charged and utilized for around 4 hours before re-charging is needed. The battery could even be replaced if needed.

#### 3. Ride-on or Walking machines

The ride-on machine is a great choice if the floor scrubber you require is for large areas such as retail interiors or inside of warehouses. This model allows the worker to steer the machinery all-around obstacles and corners easily and efficiently for the reason that the driver has a good vantage point. These kinds of floor scrubbing machines come outfitted with a 250L water tank plus another container to gather the filthy water. Walking devices are similar products that could be operated by anyone walking at the back of the machine and steering the scrubber.

#### 4. Robotic Floor Scrubber machines

A robot floor scrubber can be another option to think about. These models are great if you require a high specification floor scrubber to clean a large environment that has minimum obstructions. These versions have sensors installed so as to allow the equipment the ability to avoid humans, doors, walls and stairs. It can accomplish the cleaning task without difficulty when you start the unit up and set the course, it will clean all by itself. These floor scrubbers are proficient at cleaning 1000 square feet with each 4 hour charge.

### Floor Scrubbing Technology

Businesses have to know the model which best suit all their needs in view of the fact that there are several various models proficient at serving their requirements.

To summarize, the foldable scrubber is best for accessing difficult to get to and small parts like washrooms, while the ride-on version of floor scrubber could provide the worker with more visibility and comfort. Also, ride-ons are proficient at cleaning several hours without a refill or recharge. Automatic models allow the cleaning to happen all by itself, enabling folks to accomplish tasks somewhere else. Battery operated floor scrubbers are ideal for cleaning areas far away from power sockets. These models have the additional advantage of not getting the power lead twisted around door frames or under the machine.
